Manage security-related operations

Security endpoint overview

Overview

You can use this API for various cluster-wide security-related operations.

"onboard_key_manager_configurable_status" object

Use this API to retrieve details of whether or not the Onboard Key Manager can be configured on the cluster.

– GET /api/security

– GET /api/security?fields=onboard_key_manager_configurable_status

"software_data_encryption" object

Contains software data encryption related information.

The following APIs can be used to enable or disable and obtain default software data at rest encryption values:

– PATCH /api/security -d '{ "software_data_encryption.disabled_by_default" : true }'

– PATCH /api/security -d '{ "software_data_encryption.disabled_by_default" : false }'

– GET /api/security

– GET /api/security?fields=software_data_encryption

A PATCH request on this API using the parameter "software_data_encryption.conversion_enabled" triggers the conversion of all non-encrypted metadata volumes to encrypted metadata volumes and all non-NAE aggregates to NAE aggregates. For the conversion to start, the cluster must have either an Onboard or an external key manager set up and the aggregates should either be empty or have only metadata volumes. No data volumes should be present in any of the aggregates. For MetroCluster configurations, the PATCH request will fail if the cluster is in the switchover state.

The following API can be used to initiate software data encryption conversion.

– PATCH /api/security -d '{ "software_data_encryption.conversion_enabled" : true }'

"fips" object

Contains FIPS mode information.

A PATCH request on this API using the parameter "fips.enabled" switches the system from using the default cryptographic module software implementations to validated ones or vice versa, where applicable. If the value of the parameter is "true" and unapproved algorithms are configured as permitted in relevant subsystems, those algorithms will be disabled in the relevant subsystem configurations. If "false", there will be no implied change to the relevant subsystem configurations.

– GET /api/security

– GET /api/security?fields=fips

– PATCH /api/security -d '{ "fips.enabled" : true }'

– PATCH /api/security -d '{ "fips.enabled" : false }'

"tls" object

Contains TLS configuration information.

A PATCH request on this API using the parameter "tls.cipher_suites" and/or "tls.protocol_versions" configures the permissible cipher suites and/or protocol versions for all TLS-enabled applications in the system.

– GET /api/security

– GET /api/security?fields=tls

– PATCH /api/security -d '{ "tls" : { "protocol_versions" : ["TLSv1.3", "TLSv1.2"], "cipher_suites" : ["TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384", "TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256"] } }'

"management_protocols" object

Contains Security Protocols information.

This security protocols endpoint is used to retrieve and configure security protocols.

– GET /api/security

– GET /api/security?fields=management_protocols

– PATCH /api/security -d '{ "management_protocols" : { "rsh_enabled" : true } }'

– PATCH /api/security -d '{ "management_protocols" : { "rsh_enabled" : false } }'

– PATCH /api/security -d '{ "management_protocols" : { "telnet_enabled" : true } }'

– PATCH /api/security -d '{ "management_protocols" : { "telnet_enabled" : false } }'

– PATCH /api/security -d '{ "management_protocols" : { "rsh_enabled" : true, "telnet_enabled" : true } }'

GET Examples

Retrieving information about the security configured on the cluster

The following example shows how to retrieve the configuration of the cluster.

```
# The API:
GET /api/security:

# The call:
curl -X GET 'https://<mgmt-ip>/api/security?fields=*' -H 'accept:
application/hal+json'
```

```
# The response:
{
  "onboard_key_manager_configurable_status": {
    "supported": false,
    "message": "Onboard Key Manager cannot be configured on the cluster.
There are no self-encrypting disks in the cluster, and the following nodes
do not support volume granular encryption: ntap-vsim2.",
    "code": 65537300
  },
  "fips": {
    "enabled": false
  },
  "tls": {
    "cipher_suites": [
      "TLS_RSA_WITH_AES_128_CCM",
      "TLS_RSA_WITH_AES_128_CCM_8",
      "TLS_RSA_WITH_AES_128_GCM_SHA256",
      "TLS_RSA_WITH_AES_128_CBC_SHA",
      "TLS_RSA_WITH_AES_128_CBC_SHA256",
      "TLS_RSA_WITH_AES_256_CCM",
      "TLS_RSA_WITH_AES_256_CCM_8",

  "end_time": "2019-12-12T06:45:40-05:00",
  "_links": {
    "self": {
      "href": "/api/cluster/jobs/eCBCbd82d-1cd4-11ea-8f75-005056ac4adc"
    }
  }
}

[discrete]
=== Enabling FIPS mode in the cluster

The following example shows how to enable FIPS mode in the cluster.

= The API:

PATCH /api/security

= The call

curl -X PATCH "https://+++<mgmt_ip>+++>/api/security" -d '{ "fips.enabled": true }'+++</mgmt_ip>+++

= The response:

{
  "job": {
```

```

    "uuid": "8e7f59ee-a9c4-4faa-9513-bef689bbf2c2",
    "_links": {
      "self": {
        "href": "/api/cluster/jobs/8e7f59ee-a9c4-4faa-9513-
bef689bbf2c2"
      }
    }
  }
}

```

This returns a job UUID. A subsequent GET for this job UUID returns details of the job.

= The call

```

curl -X GET "https://+++<mgmt_ip>+++api/cluster/jobs/8e7f59ee-a9c4-4faa-
9513-bef689bbf2c2"+++</mgmt_ip>+++

```

= The response:

```

{
  "uuid": "8e7f59ee-a9c4-4faa-9513-bef689bbf2c2",
  "description": "PATCH /api/security",
  "state": "success",
  "message": "success",
  "code": 0,
  "start_time": "2020-04-28T06:55:40-05:00",
  "end_time": "2020-04-28T06:55:41-05:00",
  "_links": {
    "self": {
      "href": "/api/cluster/jobs/8e7f59ee-a9c4-4faa-9513-bef689bbf2c2"
    }
  }
}

```

[discrete]

=== Configuring permissible TLS protocols and cipher suites in the cluster

The following example shows how to configure the cluster to only allow TLSv1.3 & TLSv1.2 with selected cipher suites.

= The API:

```

PATCH /api/security

```

= The call

```

curl -X PATCH "https://+++<mgmt_ip>+++api/security" -d '{ "tls" : {

```

```
"protocol_versions" : ["TLSv1.3", "TLSv1.2"], "cipher_suites" :  
["TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384", "TLS_AES_256_GCM_SHA384"] }  
'+++</mgmt_ip>+++
```

= The response:

```
{  
  "job": {  
    "uuid": "b45b6290-f4f2-442a-aa0e-4d3ffefe5e0d",  
    "_links": {  
      "self": {  
        "href": "/api/cluster/jobs/b45b6290-f4f2-442a-aa0e-  
4d3ffefe5e0d"  
      }  
    }  
  }  
}
```

This returns a job UUID. A subsequent GET for this job UUID returns details of the job.

= The call

```
curl -X GET "https://+++<mgmt_ip>+++/api/cluster/jobs/b45b6290-f4f2-442a-  
aa0e-4d3ffefe5e0d"+++</mgmt_ip>+++
```

= The response:

```
{  
  "uuid": "b45b6290-f4f2-442a-aa0e-4d3ffefe5e0d",  
  "description": "PATCH /api/security",  
  "state": "success",  
  "message": "success",  
  "code": 0,  
  "start_time": "2021-03-22T08:52:50-05:00",  
  "end_time": "2021-03-22T08:52:51-05:00",  
  "_links": {  
    "self": {  
      "href": "/api/cluster/jobs/b45b6290-f4f2-442a-aa0e-4d3ffefe5e0d"  
    }  
  }  
}
```

[discrete]

=== Enabling security protocols in the cluster

The following example shows how to enable the security protocol rsh in the

```

cluster.

= The API:

PATCH /api/security

= The call

curl -X PATCH "https://+++<mgmt_ip>+++/api/security" -d '{
"management_protocols" : { "rsh_enabled" : true } }'+++</mgmt_ip>+++

= The response

{
"job": {
"uuid": "2980ba28-adab-11eb-8fa3-005056bbfa84",
"_links": {
"self": {
"href": "/api/cluster/jobs/2980ba28-adab-11eb-8fa3-005056bbfa84"
}
}
}
}

= The call:

curl -H "accept: application/hal+json" -X GET "https://+++<mgmt-
ip>+++/api/security/?fields=management_protocols"+++</mgmt-ip>+++

= The response:

{
"management_protocols": {
"rsh_enabled": false,
"telnet_enabled": false
},
"_links": {
"self": {
"href": "/api/security"
}
}
}

'''

|===

Name
Type
Description

conversion_enabled
boolean
a Indicates whether or not software encryption conversion is enabled on the cluster. A PATCH request initiates the conversion of all non-encrypted metadata volumes in the cluster to encrypted metadata volumes and all non-NAE aggregates to NAE aggregates. For the PATCH request to start, the cluster must have either an Onboard or an external key manager set up and the aggregates should either be empty or have only metadata volumes. No data volumes should be present in any of the aggregates in the cluster. For MetroCluster configurations, a PATCH request enables conversion on all the aggregates and metadata volumes of both local and remote clusters and is not allowed when the MetroCluster is in switchover state.

disabled_by_default
boolean
a Indicates whether or not default software data at rest encryption is disabled on the cluster.

#tls
[.api-collapsible-fifth-title]
tls

Cluster-wide Transport Layer Security (TLS) configuration information

[cols=3*,options=header]
===
Name
Type
Description

cipher_suites
array[string]
a Names a cipher suite that the system can select during TLS handshakes. A list of available options can be found on the Internet Assigned Number Authority (IANA) website.

```
|protocol_versions
|array[string]
a|Names a TLS protocol version that the system can select during TLS
handshakes. The use of SSLv3 or TLSv1 is discouraged.
```

```
|===
```

```
[#us_federal_cybersecurity]
[.api-collapsible-fifth-title]
us_federal_cybersecurity
```

Cluster-wide cybersecurity compliance information as per United States federal standards.

```
[cols=3*,options=header]
```

```
|===
```

```
|Name
```

```
|Type
```

```
|Description
```

```
|alerts_enabled
```

```
|boolean
```

a|Indicates whether or not the cybersecurity compliance alerts are enabled on the cluster. United States cybersecurity compliance involves configuring the ONTAP security features as per United States federal security policies. Enabling alerts will generate alerts when ONTAP security features are not configured as per United States federal security policies.

```

= Update the software FIPS mode or enable conversion of non-encrypted metadata volumes non-NAE aggregates

```
[.api-doc-operation .api-doc-operation-patch]#PATCH# [.api-doc-code-block]#`/security`#
```

Introduced In: 9.8

Updates the software FIPS mode or enables conversion of non-encrypted metadata volumes to encrypted metadata volumes and non-NAE aggregates to NAE aggregates.

== Parameters

```
[cols=5*,options=header]
```

```
|===
```

```
|Name
```

```
|Type
```

```
|In
```

```
|Required
```

```
|Description
```

```
|return_timeout
```

```
|integer
```

```
|query
```

```
|False
```

a|The number of seconds to allow the call to execute before returning. When doing a POST, PATCH, or DELETE operation on a single record, the default is 0 seconds. This means that if an asynchronous operation is started, the server immediately returns HTTP code 202 (Accepted) along with a link to the job. If a non-zero value is specified for POST, PATCH, or DELETE operations, ONTAP waits that length of time to see if the job completes so it can return something other than 202.

* Default value: 1

* Max value: 120

* Min value: 0

```

[.api-collapsible-fifth-title]
fips
```

Cluster-wide Federal Information Processing Standards (FIPS) mode information.

```
[cols=3*,options=header]
|===
|Name
|Type
|Description
```

```
|enabled
|boolean
```

a|Indicates whether or not the software FIPS mode is enabled on the cluster. Our FIPS compliance involves configuring the use of only approved algorithms in applicable contexts (for example TLS), as well as the use of formally validated cryptographic module software implementations, where applicable. The US government documents concerning FIPS 140-2 outline the relevant security policies in detail.

```

[cols=3*,options=header]
```

```
|===
```

```
|Name
```

```
|Type
```

```
|Description
```

```
|conversion_enabled
```

```
|boolean
```

a|Indicates whether or not software encryption conversion is enabled on the cluster. A PATCH request initiates the conversion of all non-encrypted metadata volumes in the cluster to encrypted metadata volumes and all non-NAE aggregates to NAE aggregates. For the PATCH request to start, the cluster must have either an Onboard or an external key manager set up and the aggregates should either be empty or have only metadata volumes. No data volumes should be present in any of the aggregates in the cluster. For MetroCluster configurations, a PATCH request enables conversion on all the aggregates and metadata volumes of both local and remote clusters and is not allowed when the MetroCluster is in switchover state.

```
|disabled_by_default
```

```
|boolean
```

a|Indicates whether or not default software data at rest encryption is disabled on the cluster.
