Security key-stores endpoint overview

Overview

A keystore describes a key-manager, specifically the type of key-manager.

Examples

Retrieving information for all configured key managers

The following example shows how to retrieve information about all configured key managers.

= The API:

```
GET /api/security/key-stores
```

= The call:

```
curl -X GET 'https://+++<mgmt-ip>+++/api/security/key-stores?fields=*' -H  
'accept: application/hal+json'+++</mgmt-ip>+++
```

= The response:

```
{  
  "records": [  
    {  
      "uuid": "33421d82-0a8d-11ec-ae88-005056bb5955",  
      "keystore": {  
        "type": "akv"  
      },  
      "_links": {

        }  
      }  
    },

= Retrieve keystores

```

```

[.api-doc-operation .api-doc-operation-get]#GET# [.api-doc-code-block]#`/security/key-stores`#

```

Introduced In: 9.10

Retrieves keystores.

== Expensive properties

There is an added computational cost to retrieving values for these properties. They are not included by default in GET results and must be explicitly requested using the `fields` query parameter. See [xref:{relative_path}getting_started_with_the_ontap_rest_api.html#Requesting_specific_fields\[Requesting specific fields\]](#) to learn more.

* `svm.name`
