Protocols fpolicy svm.uuid connections endpoint overview

Overview

This API is used to display and update connection status information for external FPolicy servers. You must keep the following in mind while using these endpoints:

- If the passthrough_read field is set to true in a GET collection call, only Fpolicy passthrough-read connections are returned.
- If the passthrough_read field is not provided or set to false in a GET collection call, only FPolicy server connections are returned.

Examples
